R.F. MacDonald Co. represents many of the global leaders in pump and rotating equipment manufacturing. Their scope of supply ranges from complete, turn-key equipment packages to individual replacement parts needed to keep your operation up and running. Their central warehouse maintains over \$1.0 million of inventory for immediate shipment. With their 24/7 service department and fleet of well tooled trucks they can keep your pumps up and running.

Cornell is focused on producing pumps which exceed industry expectations. Pumps which improve the technological standard of the industrial marketplace with a state-of-the-art, reliable, and energy efficient product group. Regardless of the application - feed water for a large industrial plant or cooling tower water circulation - Cornell's industrial process pumps are built for the long haul.

Cornell Pump Company offers a comprehensive line of standard and special purpose centrifugal pumps, to include 1" to 42" discharge diameters. They offer premium quality centrifugal pumps that incorporate highly engineered features specifically designed to enhance performance and longevity.

Pumps Products Include:

- Clear liquid pumps up to 30".
