R.F. MacDonald Co. announced the opening of a new office at 642 Martin Avenue, Suite B, Rohnert Park, CA, located just west of Highway 101 at the Rohnert Park Expressway. The new facility will house administrative sales offices as well as a training facility and

service center. "The new office location will provide greater accessibility to local service and support for our Northern California customers," said Jim MacDonald, President of R.F. MacDonald Co. "Our presence in the North Bay will be very beneficial to those companies that need Boiler and Pump support and services."

NEW MANDATED BOILER EMISSION REGULATIONS

The laws that mandate new regulated levels of emissions have been imposed throughout California and will begin to go into effect as early as 2010 in many air districts. R.F. MacDonald Co. has been highly active in outreaching and educating regional operators with information on the new regulations and what they need to do to comply.

One of the methods R.F. MacDonald Co. has used to reach boiler operators regarding the new regulations is their Clear the Air workshops that feature regional sessions with representatives from the associated air districts, PG&E representatives, equipment manufacturers and many other resources to provide information to operators. In addition, they have developed a new section of their website that focuses on Ultra Low NOx solutions for boilers to help attain compliance to the new regulations. "The new regulations put more pressure on boiler operators throughout California to attain low NOx levels, which will require more experienced levels of installation, service and support," continued MacDonald.
